

Electrical heating cable for the heating of long pipelines.

## LONGLINE

High Efficiency Series Resistance  
Single Conductor Heating Cable

- Circuit lengths up to 5km.
- Single supply point - minimises supply cabling costs.
- High efficiency, flat and flexible.
- High power outputs - up to 60W/m.
- For process temperature maintenance, freeze protection or heat raising.
- Easy installation in convenient lengths.

### DESCRIPTION

LONGLINE HTS1F is a series resistance, single conductor heating cable supplied in multiples of 3 cables for configuring with a 3 phase heating system. It is used for freeze protection or process temperature maintenance of long pipelines, eg. up to 5km.

A typical application is the temperature maintenance of crude or fuel oils in above ground and buried transfer lines.

LONGLINE minimises the number of electrical supplies needed and so minimises supply cabling and distribution equipment costs. Circuits are often fed at the pipe ends only.

The single conductor is sheathed with silicone rubber for flexibility.

A continuous conductive cover and over-jacket can be provided for additional mechanical protection or for grounding purposes.

The number of heating cables and their conductor sizes are designed to produce the desired output for the circuit length required. The LONGLINE heaters are connected directly to the 3 phase mains voltage or, when required, to a step-up transformer.

The large heated surface of LONGLINE'S flat foil construction results in lower operating temperatures than equivalent round conductor constructions thereby improving safety and system life. The high efficiency produces high power capability (up to 60W/m) per cable.

LONGLINE cable may be straight run to above ground pipes. For buried lines, cables are usually drawn into channel raceways within a pre-insulated pipeline system.

Cable is provided in convenient lengths for series connection at site.

## SPECIFICATION

**MAXIMUM CONTINUOUS EXPOSURE TEMPERATURE (Power ON):** 208°C (406°F)

**MAXIMUM PERMISSIBLE EXPOSURE TEMPERATURE (Power OFF):** 230°C (446°F)

**MINIMUM OPERATING TEMPERATURE:** -80°C\* (-112°F)

**MINIMUM INSTALLATION TEMPERATURE:** -40°C (-40°F)

**POWER SUPPLY:** up to 5kV 3 phase according to application requirements

**POWER OUTPUT:** up to 60W/m by design according to application requirements

### TEMPERATURE CLASSIFICATION:

Devices are classified according to rated output and the conditions of use. ie. limited pipe temp.

T2 (230°C)  
T3 (200°C)  
T4 (135°C)  
T5 (100°C)  
or T6 (85°C)

**APPROVAL DETAILS:** - Specific products

ATEX - Sira 03ATEX3292  
FM - 3009080  
EAC\* - TC RU C-GB.ГБ05.B.00188

### CONSTRUCTION:

Heating Conductors: Sized to suit application  
Max Conductors Size: 8-16mm wide x 0.8-3.5mm thick  
Insulation: Silicone Rubber  
Continuous Conductive  
Covering: Braid/Aluminium  
Over Jacket: Silicone, Thermoplastic or Fluoropolymer

### ORDERING INFORMATION:

Example: HTS1F-C or A, F, T or S/1.5

Silicone Rubber Sheath  
One heating conductor  
Continuous conductive cover  
Optional over-jacket  
Conductor thickness (mm)

### LONGLINE - A COMPLETE SYSTEM:

Reliability of the heating system is usually paramount. LONGLINE cables form only part of a high integrity LONGLINE heating system including power control, temperature control and circuit health monitoring/ alarm equipment - all specifically developed and produced by Heat Trace Ltd.

### MAXIMUM PIPE/WORKPIECE TEMPERATURE:

The surface of the heater must not exceed the maximum withstand temperature of its constructional materials or the Temperature Classification (if installed in a hazardous area). This is ensured by limiting the pipe or workpiece temperature to a safe level either by design calculation (a Stabilised Design) or by means of temperature controls.

For worst case conditions, the temperature of steel pipes should be limited to the following levels.

Cat Ref	Nom. Output (W/m)	Area Classification						Safe
		Hazardous						
		T6	T5	T4	T3	T2	T1	
HTS1F	10							217
	20							189
	30							156
	40							128
	50							98
	60							50

### TYPICAL ARRANGEMENT:

### CIRCUIT PROTECTION:

Circuit breakers, switch gear and supply cabling should be sized to cater for cold start-up conditions. Heat Trace Ltd will advise operating and start-up loads.

### ACCESSORIES:

Heat Trace supply a complete range of accessories including termination/splice kits, end seals, junction boxes, controls and fixing tape. These items are recommended for the correct operation of LONGLINE products.
