

Mineral Insulated Heating Cable  
For Higher Terminations

**MINERAL INSULATED**  
Alloy 825 Sheathed

- Twin core or single core.
- High temperature withstand.
- Factory terminated.
- Suitable for use in safe and hazardous areas.
- Available for different voltages.

## FEATURES

The **MAL** range of alloy 825 sheathed Mineral Insulated (MI) heating cable has been developed to meet the specific need for a cable having a high temperature capability and electrical resistance values needed for long circuit lengths. To meet the requirement, HTL has combined an alloy 825 sheath with heating conductors to enable an operating temperature of 800°C with resistance values from 2.1Ω/km up to 36100/km per conductor. MI cables have excellent mechanical strength and are intrinsically very resistant to corrosion. They are series resistance heaters which must be designed to provide the required heat output.
